Further Education Offer

COMING SOON!

Explore our new and exciting FE offer which will be available to book from September 2022. From animal accommodation to behaviour, our curriculum linked workshops should ‘inspire’ your students to gain some real zoo case study information to further their learning of the zoo industry.

To find out more please contact learning@chesterzoo.org.

Zoo animal behaviour

Join us for an exciting opportunity for your students to design and carry out a behaviour study at Chester Zoo. Students will understand why behaviour is essential for maintaining animal welfare, with case studies of how behaviour studies are used at Chester Zoo.

Zoo animal husbandry and accommodation

Discover how we design animal exhibits at Chester Zoo, and give your students the opportunity to design their own. Students will explore how new exhibits are planned and designed at the zoo, to maintain the highest animal welfare standards. We’ll visit the Sun bear exhibit to explore and discuss all the design elements of this amazing habitat.
Our planet is facing its toughest challenge yet. Students will discover Chester Zoos’ plan to prevent extinction. Using case studies of our conservation efforts, students will apply our conservation tools to creating their own conservation action plan for example species.

How does Chester Zoo meet the five key principles of animal well-being? Using elephants as a case study, students will delve into Chester Zoo’s experience of maintaining high quality animal health, alongside the management of common zoo-related diseases.

Discover how we prevent extinction, focussing on communication and how to share the message at the zoo and around the world. Your students will get the opportunity to plan their own piece of interpretation, raising awareness of a conservation issue or encouraging people to take action to help their chosen species.

Join us for an exciting opportunity for your students to understand the complexities of feeding zoo animals to ensure animal health is maintained. This activity packed workshop encourages students to engage with real-life scenarios giving a true feel for the role of our nutritionist.
